SPECTLINE SOFTWARE TERMS AND CONDITIONS

These Terms govern access to and use of Spectline software, including its artificial-intelligence features for analysing historical trading data, preparing and testing trading strategies, and integrating with MetaTrader 4 and MetaTrader 5. If the user enables automated trading, the software may generate and submit trading instructions through the user's broker account according to the user's settings. Trading is risky and may result in loss; no profit or particular outcome is guaranteed.

Last updated: 12 November 2026 | Version: 3.0 | Website: spectline.com

1. Scope and contractual documents

These Terms apply to the use of Spectline software, related applications, user accounts, documentation, updates and supported integration features (together, the “Service”).

The contract between the Provider and the User consists of these Terms, the information shown during an order or activation, the order confirmation, the selected plan, any separate agreement and the product documentation. An individually agreed term prevails over these general Terms to the extent of any conflict.

Before completing an order, the User can review the price, feature scope, access period, any recurring billing and other material parameters of the relevant offer. The details confirmed for that order control.

2. Provider and contact details

The Service is provided and the contract is entered into by the person identified below. Spectline is the brand used for the Service; the brand name alone does not replace the Provider's legally required business or company identification details.

• Legal name / full name: Spectline
Registered office / business address: Spišská Nová Ves
Country: Slovak Republic
Email: info.spectline@gmail.com
Website: spectline.com

3. Definitions

For the purposes of these Terms:

• “Provider” means the person identified in Section 2.

• “User” means an individual or legal entity that creates an account, orders the Service or uses it.

• “Software” or “Spectline” means the software solution, including the AI, analytics, training, testing and integration components made available under the selected plan.

• “Trading Data” means historical or current trade, account, price, settings and other data that the User provides or makes accessible to the Software.

• “Broker” means a third party that maintains the User's trading account or provides access to a market.

• “Trading Platform” means, in particular, MetaTrader 4 or MetaTrader 5 and their relevant technical interfaces.

• “Automated Trading” means a feature under which, once enabled, the Software may generate or submit trading instructions through a connected account according to available settings and rules.

3. Definitions

• “Consumer” means an individual acting outside their trade, business, craft or profession when entering into and performing the contract.

4. Service and its features

The Service provides access to Spectline software features within the scope of the purchased or activated plan. Depending on the available version, these may include importing or processing Trading Data, AI-based analysis of trading patterns, strategy training or testing, analytical outputs and integration with MetaTrader 4 or MetaTrader 5.

If the User enables Automated Trading and completes the required connection, the Software may generate and submit trading instructions to the User's account according to selected or confirmed settings. The User acknowledges that such instructions may be submitted without separate manual confirmation of each individual trade.

The exact feature scope, supported platforms, technical requirements, available markets and any limits are determined by the current product documentation and the offer for the relevant plan. A feature not expressly listed in the plan or documentation is not part of the Service.

5. Regulatory nature and limits of the Service

These Terms govern the provision of and access to Software. Describing a product as software or a technical tool does not, by itself, determine the legal classification of its actual features. The actual operation, degree of discretion, permissions over the User's account and the way trading instructions are generated and executed are relevant.

Under these Terms, the Provider does not undertake to provide personal investment recommendations based on the User's individual financial circumstances, and these Terms do not constitute a portfolio-management agreement or an agreement to execute client orders. However, no wording in these Terms changes the legal nature of an activity if a particular feature or operating model constitutes a regulated investment service or activity under mandatory law.

A feature that constitutes a regulated investment service or activity may only be provided where and by an entity that has the required authorisation or can rely on an applicable statutory exemption. Where necessary, it must be covered by a separate agreement and the relevant regulatory documentation. These Terms are not an authorisation to provide investment services.

The User must not treat analytical outputs, signals, scores, back-tests or AI behaviour as personal investment advice or as a guarantee that a particular trade is suitable for the User.

6. Trading risk warning

Trading financial instruments, currencies, CFDs, derivatives or other products available through a Broker involves risk. The risk is particularly high for leveraged products. The account value may fall rapidly and the User may lose part or all of the capital allocated to trading. Depending on the product, the Broker agreement and applicable protections, losses may in certain circumstances exceed the amount originally allocated.

The User trades at their own risk and should trade only with funds they can afford to lose. Before using a live account, the User should thoroughly test the Software and its settings on a demo account, understand the products being traded and independently assess the strategy's risk.

6. Trading risk warning

No strategy, algorithm, AI model, historical result or back-test eliminates market risk. Stop Loss, Take Profit or other protective settings may not execute at the expected price or time, for example due to price gaps, low liquidity, volatility or a connection failure.

The User should not enable Automated Trading unless they understand how it works, its risk parameters and how to stop trading.

7. AI analysis, historical data and performance

AI features analyse Trading Data and may identify statistical patterns or generate outputs based on available data, models and settings. Results depend on the quality, completeness, representativeness and accuracy of input data, as well as the methodology and market conditions.

Historical performance, back-testing, simulations, training results and results achieved by other users are not reliable indicators of future performance. Simulation results may differ materially from live trading due to spreads, commissions, swaps, slippage, latency, liquidity, price availability, outages or changes in market conditions.

The Provider does not guarantee profit, a particular success rate, prediction accuracy, number of trades, minimum return, passive income or that the Software will prevent losses. Any example, chart or historical result is informational or illustrative only unless expressly and lawfully agreed otherwise.

AI models and software outputs may contain errors, bias, omissions or inaccuracies. The Provider may change models and algorithms while maintaining the agreed features of the Service and the User's applicable legal rights.

8. User account and eligibility

The User must provide true, complete and up-to-date information during registration and use of the Service and keep that information current. The Service may only be used by a person with legal capacity to enter into a contract and who is eligible to use the relevant trading and brokerage services in their jurisdiction.

The User is responsible for protecting login details, passwords, access tokens and other authentication credentials. The User must promptly notify the Provider of suspected unauthorised access or a security incident.

The User must not make the account available to another person, circumvent security or licence restrictions, or use the Service in a manner that breaches these Terms or third-party rights.

9. Brokers and MetaTrader 4 / MetaTrader 5 integration

Some features may require a separate trading account with a Broker, MetaTrader 4 or MetaTrader 5 and a suitable internet connection. The User's Broker account, funding, trading terms, fees, margin requirements, order execution and client protections are governed by a separate agreement between the User and the Broker.

The Provider is not a party to the relationship between the User and the Broker and is not responsible for the Broker's decisions, terms, availability, rejection or delay of an order, execution price, outages or changes to its platform, except for liability that cannot be excluded under applicable law.

MetaTrader, MetaQuotes and Broker names are identifiers of their respective owners. Their mention is for the purpose of identifying compatible platforms and does not by itself imply ownership, approval or partnership with the Provider.

9. Brokers and MetaTrader 4 / MetaTrader 5 integration

Compatibility may vary depending on the platform version, Broker, account type, operating system, server and technical interfaces. The Provider does not guarantee support for every configuration or future third-party version.

10. User's duties and responsibility for trading

The User is responsible for selecting the Broker and traded product, checking eligibility to trade, configuring the account, capital, leverage, position sizes, risk limits and deciding whether to enable Automated Trading.

Before enabling Automated Trading, the User must review the strategy parameters, supported symbols and timeframes, position size, Stop Loss, Take Profit, maximum acceptable loss and any other settings available in the product. The User must reasonably monitor the Software's operation and know how to pause or disable Automated Trading.

The User must not use the Service for market manipulation, fraud, money laundering, sanctions evasion, breach of Broker rules, trading rules or applicable law. The User is responsible for their tax and regulatory obligations relating to trading.

The Provider is not required to monitor the User's trading account, notify the User about every trade or intervene in the strategy unless such a duty is expressly agreed in a separate agreement and is legally permissible.

11. Trading Data, User inputs and processing permission

The User is responsible for having the right to upload, make available and use Trading Data and other materials in the Service for the purposes agreed in these Terms. The User must not provide data whose processing would breach another person's rights, the Broker agreement or applicable law.

The User grants the Provider a non-exclusive, worldwide permission, to the extent necessary to operate the Service, to store, copy, transmit, analyse and technically modify the supplied data for the purposes of providing features, support, security and performing the contract. This permission does not transfer ownership of the data to the Provider.

Any use of data for separate purposes beyond providing the Service, in particular training general or shared models, marketing or disclosure to third parties, must be transparently disclosed to the User and must have a separate valid legal basis or consent where required by law.

The User must not upload unnecessary personal data of third parties, credentials that enable unauthorised handling of funds, or malicious code.

12. Availability, maintenance, updates and technical limits

The Provider will use reasonable efforts to operate and maintain the Service. However, it does not guarantee uninterrupted availability, error-free operation, immediate response or compatibility with all devices, networks, systems, data sources or third-party services.

The Service may be temporarily restricted or unavailable due to maintenance, updates, security measures, internet, cloud, data-source, Broker or Trading Platform outages or another event outside the Provider's reasonable control. Where practicable, the Provider will give advance notice of planned maintenance.

The Provider may release fixes, updates and feature changes. For digital content or digital services supplied to a Consumer, updates and changes will be made in accordance with mandatory legal requirements concerning conformity of digital content or services and consumer information.

13. Price, payments and any subscription

The User must pay the price stated in the order, quotation or order confirmation. The price, currency, included features, billing period, taxes and any additional fees must be shown to the User before the binding order is submitted.

Unless the invoice or an individual agreement states otherwise, the invoice payment period is 14 days from its issue date. The Provider will issue an accounting document in accordance with applicable law.

If a plan operates as a subscription or involves recurring payments, its price, billing-period length, renewal date and method, price-change conditions and cancellation procedure will be stated before the order is placed. Recurring billing will apply only where it was clearly disclosed in the order and accepted by the User.

If payment is overdue, the Provider may, after prior notice, reasonably restrict or suspend access to the paid Service where permitted by law and without affecting mandatory Consumer rights. Statutory default interest may be claimed only to the extent permitted by law.

14. Licence and intellectual property

Unless the order states otherwise, the Provider grants the User a non-exclusive, non-transferable and non-sublicensable licence, for the paid and agreed access period, to use the Software for the User's own internal purposes and within the features of the relevant plan.

All rights in the Software, source code, models, algorithms, interfaces, documentation, design, brand, databases and related materials remain with the Provider or the relevant third parties. The User receives only the rights expressly granted by these Terms or a separate licence agreement.

The User must not copy, sell, rent, sublicense or make the Software available as a service to a third party, circumvent technical protections, reverse engineer or decompile it, except to the extent that such restriction cannot be imposed under mandatory law.

Rights in MetaTrader, data sources, libraries, plugins and other third-party components are governed by their own licence terms.

15. Prohibited use and security

The User must not use the Service for unlawful purposes, disrupt its operation, attempt unauthorised access, distribute malicious code, circumvent limits or security measures, interfere with other users' accounts or overload the infrastructure.

The Provider may take reasonable security measures, restrict access or suspend an account if it has reasonable grounds to suspect a security incident, fraud, breach of law or breach of these Terms. Where circumstances permit, the Provider will inform the User of the reason.

16. Third parties and external services

The Service may depend on infrastructure, cloud providers, data sources, payment services, Brokers, Trading Platforms or other external services. Their availability and use are governed by the relevant third party's terms.

The Provider is not responsible for the content, terms, security or availability of a separate third-party service to the extent that it is outside the Provider's control. This does not affect the Provider's liability for its own breach of contractual or legal duties.

17. Consumer rights, withdrawal and digital content or services

Where the User is a Consumer and the contract was concluded at a distance or away from the Provider's business premises, the Consumer has a right to withdraw within the period and under the conditions set by law, generally within 14 days after entering into a service contract or a contract for the supply of digital content. Applicable exceptions and the start of the period depend on the legal nature of the particular performance.

If the supply of digital content or provision of a digital service is to begin before the withdrawal period expires, the Provider will obtain the Consumer's express request or consent and provide the notices and confirmations required by law. This clause does not replace a separate consent or acknowledgement that must be obtained in the checkout process.

The right of withdrawal may be lost or restricted only in cases and under the conditions expressly provided by law, for example for digital content after the statutory requirements for express consent, acknowledgement and confirmation have been satisfied. Different statutory rules apply to services. All mandatory Consumer rights remain unaffected.

A withdrawal notice may be sent to info.spectline@gmail.com or made by another unequivocal statement delivered to the Provider. The Consumer may also use a model withdrawal form if one has been provided.

For digital content or services supplied to a Consumer, the Consumer has statutory rights relating to conformity with the contract, functionality, compatibility, updates and remedies. These rights may not be excluded or restricted by these Terms.

18. Complaints and remedies for non-conforming performance

The User may report a technical problem, outage or failure of the Service to match its agreed description to info.spectline@gmail.com. The report should include the account identifier, description of the issue, when it occurred and available technical information. The User should not send passwords or full Broker account credentials.

The Provider will review the report and, depending on the issue, propose an appropriate remedy, such as correction, restoration of access, re-supply of digital content or another remedy under the contract and applicable law.

For Consumers, statutory rules on defects and conformity of digital content or services apply, including statutory periods and remedies. These Terms do not restrict Consumer rights. For Users who are not Consumers, defect rights are assessed under the contract and applicable law.

A trading loss, an unfavourable strategy result or a difference between live trading and a historical test is not automatically a technical defect in the Software. This does not affect the User's rights where the issue resulted from the Provider's breach or a defect in the Service.

19. Personal data and confidentiality

Personal data processing is governed by the separate Privacy Policy available at spectline.com. That notice should explain, in particular, the purposes, legal bases, categories of data, recipients, retention periods and data-subject rights.

Where the Provider processes personal data on behalf of the User as a processor, the parties will enter into a data processing agreement under Article 28 GDPR where such an agreement is required by the actual processing arrangement.

19. Personal data and confidentiality

The parties will protect non-public confidential information obtained through use of the Service and use it only to perform the contract, comply with legal obligations or protect their rights. This duty does not apply to information that is public without breach of an obligation or must be disclosed by law.

20. Suspension and termination of access

The User may stop using the Service and cancel a subscription using the procedure stated in the order or user account. For a subscription, cancellation will prevent further renewal in accordance with the conditions shown at purchase; an already started billing period and any refund are governed by the order and mandatory law.

The Provider may reasonably restrict or suspend access for overdue payment, breach of these Terms, a security risk, suspected fraud or where necessary to comply with a legal obligation. Where circumstances permit, the Provider will notify the User in advance and allow an opportunity to remedy the issue.

When access ends, the licence to use the Software ends, except for rights that must continue under law or a separate agreement. Termination does not affect claims accrued before its effective date or the obligation to settle amounts due.

21. Liability and limitations

Each party is liable for breach of its contractual and legal duties to the extent provided by applicable law. The Provider is not responsible for the User's trading decisions, market movements, price changes, losses caused by the User's settings, Broker conduct or third-party service outages, unless those circumstances result from the Provider's breach of duty.

The Provider does not warrant that the Software will be error-free or uninterrupted, that AI will identify every relevant pattern or that the Broker will execute automated instructions. The Provider remains liable for its own obligations to provide the Service under the contract and applicable law.

Nothing in these Terms excludes or limits liability or a right that cannot be excluded or limited under mandatory law, in particular statutory Consumer rights, liability for intentional conduct or any other mandatory liability.

22. Complaints and alternative consumer dispute resolution

Questions, complaints or requests for redress may be sent to info.spectline@gmail.com. The Provider will seek to review and resolve the complaint without undue delay.

A Consumer may apply to a competent alternative dispute resolution entity under Slovak law where the statutory conditions are met. Depending on the nature of the dispute, the competent entity may be the Slovak Trade Inspection or another entity on the list maintained by the Slovak Ministry of Economy. The applicable rules and list should be checked at the time the application is submitted.

23. Governing law and disputes

These Terms and the contractual relationship are governed by the laws of the Slovak Republic unless mandatory conflict-of-law rules provide otherwise.

Where the User is a Consumer habitually resident in another country, the choice of Slovak law does not deprive the Consumer of the protection afforded by mandatory provisions of the law of their habitual residence where those provisions apply.

23. Governing law and disputes

A dispute that cannot be resolved amicably or through an applicable out-of-court procedure will be decided by a court having jurisdiction under applicable law. These Terms do not determine jurisdiction in a way that removes statutory Consumer rights.

24. Amendments and final provisions

The Provider may update these Terms due to changes to the Service, security, technology or applicable law. The revised wording will apply from the date of publication or a later notified date. A change does not retrospectively affect rights and obligations already accrued, except where required by law or otherwise agreed by the parties.

If any provision is invalid or unenforceable, the remaining provisions remain in effect. The invalid provision will be replaced with a valid provision that most closely reflects its original lawful and commercial purpose.

The Slovak version prevails if the Slovak and English versions differ, unless mandatory law requires otherwise.
